RAMAKRISHNA VIVEKANANDA ASHRAM (REGD.)

1-11-55/27 Sharana Nilaya Nijalingappa Nagar, Raichur - 584101

This is to certify that **Mr Veeresh A** carried out the project titled "**Child Rights and Education**" in the supervision of P Venugopal in our organisation. It is further certified that he spent **50 Hours** on the project, because of the Project undertaken and his contribution it was very helpful to our students to elevate their Basic mathematical skills , analytical Skills and awareness about child rights.

P. Venugopal 24/6/2024
P. VENUGOPAL

**RAMAKRISHNA
VIVEKANANDA ASHRAM (REGD.)**

1-11-55/27 Sharana Nilaya Nijalingappa Nagar, Raichur - 584101

Date: 24-06-2024
Place: Raichur.

TO WHOMSOEVER IT MAY CONCERN

This is to certify that Sri Veeresh A, voluntarily offered 50 hours of Educational service in our organisation.

He taught Fundamentals of mathematics to our students. His indepth knowledge of mathematics and teaching methodologies has helped to improve mathematical skills of our students and awareness about child rights.

We are very thankful for giving generous gift of time, talent and Energy.

P. Venugopal
(PRESIDENT)

1.Introduction

The "**Child Rights and Education**" project, spearheaded by the Ramakrishna Vivekananda Ashram, addresses the critical educational needs of underprivileged children in the Raichur region. This project focuses on the dual goals of promoting awareness about child rights and enhancing the quality of education available to these children. In many parts of the world, including our communities, children's rights are often overlooked, and access to quality education remains a significant challenge. By providing structured educational support and raising awareness, this project seeks to empower children to understand and exercise their rights and access opportunities for personal and intellectual growth.

Our approach involves organizing after-school tutoring programs, conducting awareness campaigns about child rights, and creating safe, child-friendly learning environments. By focusing on fundamental mathematical concepts, we aim to build a solid academic foundation that will help these children succeed in their future studies. The project not only focuses on academic enhancement but also seeks to foster a sense of self-worth and rights awareness among children. This holistic approach is designed to cultivate well-rounded individuals who are not only educated but are also aware of their rights and responsibilities as members of the community.

2.Problem Identification and the Cause of the Problem

The primary issue identified in the Raichur community is the significant gap in access to quality education for children from underprivileged backgrounds. Many children in this region come from families that struggle economically and socially, which limits their opportunities for a proper education. Furthermore, there is a lack of awareness regarding child rights, which exacerbates the issue, as children are often seen more as economic assets rather than individuals with rights to education and personal development. These factors lead to low literacy rates, limited

knowledge, and restricted opportunities for future advancement, perpetuating the cycle of poverty and social inequality.

3. Objective to be achieved

The core objective of the "Child Rights and Education" project is to provide quality education and raise awareness about child rights among underprivileged children in Raichur. By focusing on fundamental mathematical concepts such as algebra, BODMAS, LCM, HCF, principles of interest, and calculations involving squares, square roots, cubes, and cube roots, the project aims to strengthen the academic skills of these children, equipping them with the knowledge needed for their future studies and everyday life. Additionally, the project seeks to create awareness about child rights, ensuring that children and their families understand the importance of education and the child's rights. By achieving these objectives, we aim to create an environment where children can thrive academically and personally, develop critical thinking skills, and become informed and active members of their community, capable of contributing positively to society and their personal growth.

4. Various Steps taken to achieve the objectives

a. Identifying the Target Group:

The first step in the project was to identify the children who would benefit most from our intervention. Our focus was on children from economically disadvantaged backgrounds who had limited access to quality education. To ensure we reached the right audience, we collaborated with local schools, community leaders, and social workers. Through these partnerships, we were able to identify families and children who were most in need of educational support. By understanding their specific needs and challenges, we tailored our project to be as effective as possible, ensuring that no child was left behind.

b. Curriculum Development:

A comprehensive curriculum was developed to address the gaps in the children's education, focusing specifically on fundamental mathematical concepts. These concepts included algebra, which forms the basis for higher mathematical thinking; BODMAS, which is crucial for understanding the order of operations in mathematical expressions; LCM and HCF, which are essential for problem-solving in various contexts; and calculations involving principles of interest, squares, square roots, cubes, and cube roots. These topics were chosen because they not only form the foundation of many advanced mathematical issues but also have practical applications in everyday life. The curriculum was designed to be interactive, incorporating visual aids, real-life examples, and hands-on activities to make learning engaging and effective.

c. Establishing Learning Spaces:

We recognized the importance of creating a conducive learning environment where children could feel safe, comfortable, and motivated to learn. To achieve this, we set up child-friendly learning spaces at the Ashram. These spaces were equipped with necessary educational materials, including textbooks, worksheets, visual aids, and interactive tools. The learning environment was designed to be visually appealing, with colourful charts, posters, and educational toys to stimulate the children's interest and curiosity. By providing a structured yet welcoming environment, we aimed to create a space where children would look forward to learning and feel encouraged to participate actively.

d. Awareness Campaigns:

To address the lack of awareness about child rights, we organized a series of awareness campaigns within the community. These campaigns aimed to educate parents, guardians, and community members about the importance of child rights, particularly the right to education. The campaigns included interactive sessions with parents and children, where we discussed the significance of education, the long-term benefits of schooling, and the rights of children to a safe and nurturing environment. Informative pamphlets and brochures were distributed, outlining the rights of the child and the importance of supporting their educational journey. These campaigns played a crucial role in changing perceptions about education and child rights in the community.

e. Volunteer Engagement and Training:

A crucial component of the project was the involvement of volunteer teachers, including myself, who were passionate about making a difference in the community. To ensure that the volunteers were adequately prepared, we conducted training sessions focusing on effective teaching methodologies, classroom management, and the specific educational needs of underprivileged children. The training emphasized the importance of empathy, patience, and encouragement, equipping volunteers with the skills needed to create a supportive and nurturing learning environment. By investing in the training of volunteers, we ensured that the children received quality education from individuals who were not only knowledgeable but also committed to their success.

f. Conducting Tutoring Sessions:

Regular after-school tutoring sessions were conducted, focusing on the mathematical concepts outlined in the curriculum. These sessions were designed to be interactive and engaging, utilizing a variety of teaching methods to cater to different learning styles. For example, algebraic concepts were taught using visual aids and real-life scenarios to make the abstract ideas more relatable. BODMAS rules were reinforced through practical exercises and games, encouraging children to understand and apply the order of operations. The use of real-life examples helped demystify complex topics, making learning enjoyable and less intimidating for the children.

g. Monitoring and Evaluation:

To assess the progress of the children and the effectiveness of the project, regular monitoring and evaluation were conducted. Pre- and post-assessments were used to measure the children's understanding of the mathematical concepts taught. Feedback sessions were held with the children to gather their thoughts on the tutoring sessions, and adjustments were made to the teaching methods based on their feedback. Geo-tagged pictures were taken to document the learning activities, providing a visual record of the project's impact. These pictures not only served as a testament to the work being done but also provided transparency and accountability to the project's stakeholders.

h. Collection of Testimonials and Feedback:

Throughout the project, we collected testimonials from the children, parents, and community members to gauge the impact of our efforts. These testimonials highlighted the positive changes observed in the children's learning abilities, their increased interest in education, and the overall improvement in their confidence levels. Parents expressed their gratitude for the support provided, noting that their children were more enthusiastic about attending school and participating in educational activities. The feedback from the community was overwhelmingly positive, reinforcing the importance of continuing and expanding the project to reach more children.

6. Effectiveness of the Project

The "Child Rights and Education" project has been highly effective in achieving its objectives. The targeted children have shown remarkable improvement in their understanding of fundamental mathematical concepts. The interactive and engaging teaching methods employed have not only enhanced their academic skills but also sparked a genuine interest in learning. The awareness campaigns have been successful in educating the community about the importance of child rights and the value of education, leading to increased support from parents and guardians. By creating child-friendly learning spaces, we have provided a safe and conducive environment for children to learn and grow.

The project has also fostered a sense of empowerment among the children, as they now have a better understanding of their rights and the importance of education in their lives. The use of geo-tagged pictures has provided a visual record of the project's impact, showcasing the active participation of the children and the positive changes in their learning environment. Overall, the project has made a significant contribution to the community by improving the educational opportunities for underprivileged children and raising awareness about the critical importance of child rights.

7. Identified Societal Problems

A. Lack of Awareness About Child Rights:

In many underprivileged communities, there is a significant lack of awareness about child rights. This often results in children being deprived of their right to education, as they are seen more as contributors to the household income rather than individuals with rights and potential. This project has identified the need to educate both children and adults about these rights to ensure that every child is allowed to learn and grow.

B. Limited Access to Quality Education:

Many children in the Raichur region face significant barriers to accessing quality education. Socioeconomic factors, inadequate infrastructure, and a lack of trained educators contribute to this issue. By providing targeted educational support, this project aims to bridge the gap and create opportunities for these children to receive a proper education.

C. Illiteracy Among Women:

The issue of illiteracy among women is not simply due to laziness or apathy, as it often is for men. Instead, a deeper, more influential cause lies in the age-old perception of women as inferior, a perception that has unfairly defined their role for generations. Society has reduced women to mere household workers and objects of pleasure, rather than recognizing them as equal partners or even the "better half" of men. This mindset has led to a significant handicap in our societal development. Women are the nurturers and sustainers of the human race, often referred to as the mothers of civilization. It is imperative that we recognize the injustice inflicted upon them and take steps to rectify this deep-rooted wrong, both for their sake and for the betterment of society as a whole.

8. Conclusion

The "**Child Rights and Education**" project at Ramakrishna Vivekananda Ashram has proven to be a transformative initiative for underprivileged children in the Raichur region. By focusing on providing quality education and raising awareness about child rights, the project has significantly contributed to improving the lives of these children. The structured approach, involving the identification of target groups, curriculum development, creation of child-friendly learning spaces, and community awareness campaigns, has effectively addressed the educational gaps and socio-cultural barriers that hinder children's development.

Through this project, we have not only enhanced the mathematical skills of the children but also empowered them with knowledge about their rights and the importance of education. The involvement of volunteers, the engagement of the community, and the use of innovative teaching methods have ensured that the children receive a holistic educational experience. The positive feedback from children, parents, and community members underscores the project's success and its impact on the community.

Moving forward, it is crucial to continue these efforts, expand the reach of the project, and explore additional ways to support the educational and personal growth of underprivileged children. By doing so, we can contribute to creating a more educated, aware, and empowered future generation, capable of making a positive impact in society.
